Large Avalanche on Sawtooth Mountain

Date
Wed, 02/21/2024 - 12:30
Activity
Skiing

Photo of an avalanche observed yesterday (2/22) on the SW face of Sawtooth Mountain at about 10,600’. Looks to be a few days old, but hard to tell since all skier traffic from the weekend has been erased with Tuesday’s wind/precip. If you look closely, you can see the crown extends across the entire face.

Region
Cooke City
Location (from list)
Goose Lake
Observer Name
akio joy
