

Woody Ridge, Cooke City

Date

Mon, 11/16/2020 - 10:59

Activity

Skiing

Generally stable snowpack observed. Roughly 10" thick hard crust layer was observed on ground, with roughly a foot of fresh snow on top of that. No propagation in pits at mid elevations. Strong winds at upper elevations were cross loading/scouring western slopes. Southerly aspects/exposed areas had noticeably less snow.

Region

Cooke City

Location (from list)

COOKE CITY
