

Cooke City. Sheep Creek Drainage

Date

Sun, 11/29/2020 - 11:01

Activity

Skiing

Pit test summary:

total depth:

140cm

First did ECT

Had ECTN21 on one ~35cm down (105 cm from bottom). Wasn't even a clean break. Just kind of broke apart.

Got no other breaks. When collapsing the column after the entire thing slid clean off on a layer ~85cm down (55 from bottom).

So we did a follow up CT.

CT22 on the layer ~35cm down (105 cm from bottom).

CT30 on the layer ~85cm down (55 from bottom). We really laid into it on the final few hits to see if we could get it to break.

Region

Cooke City

Observer Name

Peter Ottsen
