

Beehive

Date

Wed, 12/16/2020 - 17:16

In Beehive again today for AAI Rec 1. Toured up to 9100 ft on the Beehive/Middle Divide. Poor structure throughout tour as expected, and we got ECTP 17-24 within the basal facets in a wind loaded area where the new snow depth was 50 cm. No natural avalanches observed, or cracking/collapsing. Still low tide and sporty on the way down.
