Latitude

44.96090

Longitude

-111.10000

Notes

Toured up Bacon Rind today. As expected we experienced dozens of massive collapses, shooting cracks, etc and were able to crack test slopes easily. Pretty fun really. Above 8k the [slab](#) became more supportable and collapses became less frequent, but traveled further. Needless to say we avoided all terrain over 30 degrees. It was snowing hard (S5) with moderate South winds when we left to drive home (1700), but it was clear by the time we got to Specimen Creek.
