Activity

Skiing

On SE at 7000ft noticed developed depth hoar at the base of the snowpack. HS was 105. ECTP30 on this layer. But noticed near surface facets around the middle of the snowpack.

On a N facing aspect at 7300ft, I dug another test put and got a ECTP30 105cm up from ground on near surface facets.

Found variable conditions on most aspects, NE slopes has some soft wind loaded snow that provided good riding conditions.

Around 1330 snow rolled in at S1 rates.

Region

Southern Gallatin

Location (from list)

Specimen Creek

Observer Name

Joey Manship
