

Specimen Creek

Date

Tue, 12/21/2021 - 10:30

Activity

Skiing

ECTP 8 @ 15cm 7800' E. on Specimen Ridge. LOC: First hard basal faces below a decomposing crust about 10cm off the ground

Lots of whomping on lee and sheltered slopes. We noticed a few pinwheels at later in day below 7500'.

Generally poor structure and poor strength. I don't know what SWAG notation for sagebrush is but lots of that...

Region

Southern Gallatin

Location (from list)

Specimen Creek

Observer Name

Ryan Griffiths
