

Wind Slab and surface hoar in Flanders area

Date

Mon, 02/28/2022 - 01:40

Activity

Skiing

Found 2-4 mm SH on our way up Flanders. Near ridge line there's a 3-4", dense wind slab that was quite touchy. I chucked a basketball size piece of cornice onto a small test slope and observed it collapse and crack.

Region

Northern Gallatin

Location (from list)

Flanders Creek

Observer Name

S Gill
