

"We also conducted avalanche mitigation on our Cabin's Road at 4:30pm. The snowpack in this zone doesn't get skied and is representative of the backcountry. The slope is ENE around 8,400'. Several wet slab avalanches were produced with explosives and ski cutting. The avalanches ranged from R4/D2 to R2/D1. They all hit the road and several crossed, and buried, the Cabin's Road. Although most of this mitigation was done with explosives, it took minimal effort with skis to get snow moving. The crowns were 2-3' deep and ran on the ground." Photo: YCSP

Advisory Region

Northern Madison
