Remote trigger on Blackmore

Mt Blackmore Northern Gallatin 11/9/2022 Code HS-ASr-R1-D2-I Elevation 9800 Aspect E Latitude 45,44440

Longitude -111.00400 Notes

Number of slides

Slab Thickness 14.0 inches Slab Width

A skier remotely triggered an avalanche on Mt Blackmore (11/9/22).

From email: "I <u>ski cut</u> the top of the face and remote triggered a hard <u>slab</u> from 50' above the crown. It broke full width of the <u>couloir</u> feature, 150' wide and 10-18" deep. Broke on new snow/old snow interface which was another hard <u>wind slab</u>. The avalanche ran the length of the East face and stopped just below the last set of cliffs."

Number caught 0 Number buried Avalanche Type Hard slab avalanche Trigger Skier Trigger Modifier r-A remote avalanche released by the indicated trigger R size 1 D size **Bed Surface** I - Interface between new and old snow Problem Type Wind-Drifted Snow
