

Wind affected snow in beehive basin

Date

Thu, 11/17/2022 - 12:00

Activity

Skiing

Snowboarding

Toured into upper beehive with intentions of riding some steeper terrain. Widespread wind buff, observed small natural wind slabs that released, seemed isolated to south facing slopes from the recent north winds. Wide spread shooting cracks, however nothing seemed to propagate and slide on small test slopes.

snow depth varied from 20cm to 100+cm,

generally filled in

kept our terrain simple

Region

Northern Madison

Location (from list)

Beehive Basin
