

Mt Ellis (main summit)

Date

Thu, 12/15/2022 - 07:45

Activity

Skiing

Yesterday was a beautiful ski day on Ellis. On the approach we experienced no signs of instability. On top there was only light, intermittent wind with no signs of wind loading. We did experience surface sluffs on some of the steeper terrain and these could be managed. We crossed paths with two solo skiers. Fun day in the mountains.

Region

Northern Gallatin

Location (from list)

Mt Ellis
