

Deep snow in Beehive, some sluffing

Date

Thu, 04/20/2023 - 17:35

Activity

Snowboarding

20-36" of low to medium density snow in beehive, bear, and middle basins. Moderate west winds and overcast skies. It snowed lightly all day and the sun never came out.

We skied south, east, and west aspects. Snow was mostly right side up and was unconsolidated. Sluffs were running on steeper terrain, but other than that, we didn't experience any reactivity or signs of unstable snow.

Region

Northern Madison

Location (from list)

Middle Basin

Observer Name

Josh Lipkowitz
