## **Drifted snow with facets underneath**

Date Fri, 11/10/2023 - 14:30 Activity Snowshoeing

Got into the bowl below the face of the peak and didn't feel comfortable going any further wind slabs were present on the level surfaces around the lake with facets underneath that. Also note that snow depth was minimal to about a foot but quickly increased around the 9000ft mark to the 2-3ft range.

Region Northern Gallatin Location (from list) Hyalite Peak Observer Name Sawyer Haupt
