

S. Cooke City

Date

Fri, 12/08/2023 - 14:25

Activity

Skiing

From email:

"South of Cooke City today. Good conditions on low-angle open meadows. Fun problem-solving in the trees!

MC/PC/PS/C, seasonal temp (20s), calm.

No collapses or shooting cracks. Corners broke on steeper kick turns. I had a good view of lower (N) Woody Ridge and did not observe any Avalanche activity. I don't trust this shallow snowpack, but really fun low-angle meadow skipping.

HS 74cm; ECTN14 on new-snow M/F interface, ECTP21 on old-snow [depth hoar](#) interface."

Region

Cooke City

Location (from list)

Woody Ridge
