

On 2/16/24 we saw a lot of old and recent avalanches that happened at various times over the last week, and in a wide variety of terrain. On lower elevation, generally non-wind-loaded terrain in the trees we saw at least 4 avalanches that were 1-2' deep and at least 100' wide. Near ridgelines there were many avalanches, harder slabs, at least 1-2' deep breaking hundreds of feet wide. Photo: GNFAC
