

Avalanche between Bald Peak and Lionhead

Date

Sat, 02/24/2024 - 11:16

Activity

Snowmobiling

Observed signs of a large avalanche along West aspect of Lionhead. I am not sure when it occurred. At this distance and my experience level I can only estimate the crown at 3-4' and 1000'+ feet wide. It appears to have run about 650' vertical feet and the runout zone goes all the way to Targhee creek into several terrain traps.

Region

Lionhead Range

Location (from list)

LIONHEAD AREA

Observer Name

Keenan Stahl
