

Natural Avalanche Bridger Bowl

Bridger Bowl
Bridger Range
11/7/2024
Code
L-N-R2-D1.5-G
Elevation
8000
Aspect
NE
Latitude
45.81560
Longitude
-110.92300
Notes

On 20241107 I observed a small natural avalanche from the top of the PK lift at Bridger Bowl. The [slide](#) occurred near the Slushman's lift on a NNE [aspect](#). It started as a small release in the upper start zone and entrained much of the snow in the [couloir](#) down to the ground. L-N-D1.5- G.

Avalanche occurred after the start zone had come into the sun for a few minutes. The rest of the path was in the shade.

Wind speed at 11am 24mph gusting to 28mph on Bridger Ridge. Sky Clear. Temp 26F.

It was a relatively small [slide](#) but had enough power to carry a skier or rider through some very nasty terrain. Similar [aspect](#) and elevation to the Super [Couloir slide](#).
