**HS:**76  
**Layer Notes:**  
 28-0cm: Problematic layer

**Notes:** Experienced a couple of large-ish collapses- each estimated around 15-20m width. The sound of them was subtle though, if you weren't paying close attention you likely have missed them.

Also, the ECTN23 in this snowpit made a remarkably loud sound, though it didn't propagate in my test.
