

Large recent wet loose avalanches at Bridger

Date

Thu, 05/01/2025 - 10:00

Activity

Skiing

Saw many recent looking wet loose avalanches on east facing slopes at Bridger. We got a good look at the debris pile from one in Z chute and it looked big enough to bury a person (D2) and had run far past the cat track into south bowl.

We encountered a lot of variation in ski penetration with ~1' of loose melt forms in places on north and east facing slopes ~8k' in elevation.

Region

Bridger Range

Location (from list)

Bridger Bowl

Observer Name

Heather Myers
